

ARTIFICIAL INTELLIGENCE

WHAT IS INTELLIGENCE?

WHAT ARE THE INDICATORS?

WHAT IS INTELLIGENCE?

- Quantity of information?
- Speed of processing?
- Are any computers intelligent yet?
- Are all people intelligent?

AI EXAMPLES

- **Game Playing**
- **Robot Control**
- **Problem Solving**
- **Machine Vision**
- **Natural Language Processing**
- **Intelligent Tutoring Systems**

These days, it's basically applied machine learning

GAME PLAYING

- Checkers
- Chess
- Go
- **Why games?**
- **What does it mean for a game to be “solved”?**
- **What games will AI not be able to solve anytime soon?**

WHAT IS A PROBLEM?

**HOW DO WE GO ABOUT SOLVING A
PROBLEM?**

STATES

Independent, complete representation of a situation/problem

- Picture of a game board
- Save file for a video game
- Other examples?

STATE SPACE

- A problem can have any number of states
- Actions change one state into another
- This web of states and connections forms the state space
- Somewhere in the state space are “desirable” states
 - Goal states

TIC-TAC-TOE STATE SPACE

SEARCH METHODS

- Now solving a problem simply means navigating the state space
- How do we do that?
- Blind Search
 - Demo

GET SMARTER - HEURISTICS

- **Blind search kinda sucks**
- **Let's guess how far the solution is from a given state**
 - **Heuristic**
- **In the maze: distance to the exit**
- **A* Search**

WHEN THIS BREAKS DOWN - WICKED PROBLEMS

What if we can't know
the state, or our
actions, or what a
goal state looks like?

Unfortunately, most
modern problems are
this

Based upon Rittel and Webber (1973)

ROBOT CONTROL

- **Robots can't know everything in advance**
 - No knowledge of state space
- **Reinforcement Learning**
 - Develop behaviors evolutionarily, not through pre-programmed routines
 - Sometimes lots of error

COMPUTER VISION

- Text Recognition
- Facial Recognition
- Automated Driving
- Medical Imagery
- Face Construction/Recreation
- 3D Model Reconstruction

AI BIAS

AI are NOT unbiased, they are exactly as biased as the people that make them

Amazon's facial recognition matched 28 members of Congress to criminal mugshots

New ACLU test illustrates the limits of Amazon's Rekognition system

By [Russell Brandom](#) | [@russellbrandom](#) | Jul 26, 2018, 8:02am EDT

“11 of the 28 false matches misidentified people of color (roughly 39 percent), . Only twenty percent of current members of Congress are people of color, which indicates that false-match rates affected members of color at a significantly higher rate.”

INTELLIGENT TUTORING SYSTEMS

- Observe student behavior to create profile
- Assess how a student is progressing
- Adapt material to suit student's needs
- Model student engagement and frustration to maintain focus
- Yep, Watson is here too

AUTOMATION

**BUG ROB ABOUT
(APPROPRIATE) STUFF
WHENEVER YOU WANT!**

ROBTHOMP@UW.EDU
